

100% Community Survey, Otero County, 2024

Sample Demographic Tests, February 2024, prepared by the Center for Community Analysis, New Mexico State University for the Anna Age Eight Institute, New Mexico State University.

About this document

This document contains demographic test results from the 100% Community Survey conducted in Otero County, New Mexico, between January and August 2024. Results include responses that differed significantly based on respondent demographics ($p < 0.05$). Chi-square or Fisher's exact tests were used to test for differences in questions primarily about need and accessibility, based on the following demographic measures:

- Race and Hispanic origin
- Gender Identity
- Parental household type
- Household income
- Age
- Language(s) spoken at home
- English Proficiency
- Neighborhood/School District
- Age at parenthood
- Lives with extended family or tribal community
- Nativity
- Education level

Differences in Internet Access

- Men were more likely than women to report not having internet access at home, with 29.7% reporting a lack of access compared to 11.5% ($p<0.001$).
- Households earning less than \$25,000 a year were most likely to not have internet access at home (31.8%) compared to other groups (less than 7%) ($p<0.001$).
- Those with a high school diploma or less were the most likely to not have home internet access at home (22.1%) ($p=0.01$).
- Respondents in Gadsden Independent School District were the most likely to not have internet access at home (28.6%) ($p=0.05$).

Differences in Need for Medical Care

No significant differences were found.

Differences in Access to Medical Care

- White, non-Hispanic individuals (42.2%) were more likely than Hispanic or Latino individuals (30.5%) to report having difficulties getting medical care ($p=0.04$).
- Households earning less than \$25,000 were more likely to report difficulty getting medical care (42.2%) compared to those in higher income brackets ($p=0.03$).
- Those with a Master's degree or higher (56.0%) were the most likely to report difficulty accessing medical care, followed by those with a Bachelor's degree (41.9%) ($p=0.02$).
- Residents of Chaparral (47.8%) were the most likely to report difficulty accessing medical care, followed by those in La Luz (42.9%) and Alamogordo (37.4%) ($p<0.001$).
- Those who do not live in an extended family or tribal community were more likely to report difficulties accessing medical care (35.9%) compared to those who do (19.6%) ($p=0.02$).
- Foreign-born individuals were more likely than U.S.-born individuals to report difficulty accessing medical care, with 61.3% reporting difficulties compared to 30.8% ($p<0.001$).

Differences in Need for Dental Care

- Respondents aged 40–49 were the most likely to report needing dental care, with 97.5% reporting a need ($p<0.01$).
- Those who speak a language other than English at home were more likely to report needing dental care (92.5%) compared to English-only speakers (83.1%) ($p=0.02$).

Differences in Access to Dental Care

- Respondents who live in an extended family or tribal community were more likely to report difficulties getting dental care (46.4%) than those who do not (29.0%) ($p=0.01$).

Differences in Need for Mental Health Care

- Single-parent/guardian households were the most likely to report needing mental health care, with 71.6% reporting a need ($p<0.01$).
- Those with an annual household income of less than \$25,000 were the most likely to report needing mental health care (66.7%) ($p<0.001$).
- Respondents who speak English "Well/Very well" were more likely to report needing mental health care (58.7%) compared to those who speak English "Not at all/Not well" (23.5%) ($p<0.01$).
- U.S.-born respondents were more likely to report needing mental health care (59.4%) compared to foreign-born respondents (40.5%) ($p=0.04$).

Differences in Access to Mental Health Care

No significant differences were found.

Differences in Need for Affordable Housing Services

- Those with an annual household income of less than \$25,000 were the most likely to report needing affordable housing services, with 40.4% reporting a need ($p<0.001$).
- Respondents with a high school education or less were the most likely to report needing affordable housing services (27.1%) ($p=0.01$).
- By neighborhood, La Luz had the highest proportion of respondents reporting a need for affordable housing services (29.4%) ($p=0.01$).

Differences in Access to Affordable Housing Services

- Those with an annual household income of less than \$25,000 were the most likely to report having difficulties getting affordable housing services, with 86.2% reporting difficulty ($p<0.001$).
- Respondents with a bachelor's degree were the most likely to report difficulty accessing affordable housing services (83.3%) ($p=0.05$).
- By age, those 40–49 were the most likely to report difficulties getting affordable housing services (82.6%) ($p=0.04$).

Differences in Need for Food Assistance Services

- Respondents from Hispanic or Latino backgrounds were more likely to report needing food assistance services, with 63.6% reporting a need, compared to 52.2% of White non-Hispanic respondents ($p=0.04$).
- Among household types, single-parent or guardian households were the most likely to report needing food assistance services (80.3%), followed closely by other guardians or caretakers (78.3%) ($p=0.02$).
- Lower-income households were significantly more likely to report needing food assistance services, with 81.1% of those earning less than \$25,000 per year indicating a need, compared to 51.4% of those earning between \$25,000 and \$54,999, and just 26.9% of those earning \$55,000 or more ($p<0.001$).
- Education level was associated with the need for food assistance, with those having a high school education or less being the most likely to report needing services (69.3%), followed by those with some college or an associate degree (57.2%). Respondents with a bachelor's degree (46.4%) or a master's degree or higher (30.8%) were the least likely to report a need ($p<0.001$).

- By age, the highest reported need for food assistance services was among respondents aged 18-24 (77.2%), followed by those aged 30-39 (65.0%). The lowest need was reported by those 60 or older (43.3%) ($p < 0.01$).
- Respondents living in extended family or tribal communities were also more likely to report needing food assistance services (75.7%) compared to those not in such living arrangements (57.5%) ($p < 0.01$).

Differences in Access to Food Assistance Services

- Regarding difficulties accessing food assistance services, respondents with a bachelor's degree were the most likely to report difficulties (53.1%), while those with a high school education or less were the least likely (22.5%) ($p < 0.01$).
- Neighborhood differences were notable, with residents of Tularosa (6.9%) and Mescalero (9.1%) being the least likely to report difficulties accessing food assistance, while those in Chaparral (42.9%) and Alamogordo (37.3%) were the most likely ($p < 0.001$).
- Respondents not living in extended family or tribal communities were far more likely to report difficulties accessing food assistance services (36.8%) compared to extended family or tribal community residents (9.4%) ($p < 0.001$).

Differences in Need for Public Transportation Services

- For public transportation services, the need was highest among those earning less than \$25,000 per year (36.1%), decreasing to 16.1% for those earning between \$25,000 and \$54,999, and just 7.7% for those earning \$55,000 or more ($p < 0.001$).
- By age, respondents aged 50-59 reported the highest need for public transportation (32.1%), while those aged 25-29 reported the lowest (10.7%) ($p = 0.02$).

Differences in Access to Public Transportation

- Difficulties using public transportation were most commonly reported by single-parent households (92.3%) ($p = 0.05$).
- Residents in /Tularosa, Chaparral, and La Luz had high rates of reporting difficulties using public transportation compared to residents in Mescalero and Alamogordo.

Differences in Need for Job Training Programs

- Respondents from households earning less than \$25,000 were the most likely to report needing job training programs, with 33.8% indicating a need, compared to 13.6% of those earning between \$25,000 and \$54,999 and 13.0% of those earning \$55,000 or more ($p < 0.001$).
- By neighborhood, respondents from Chaparral, Alamogordo, and La Luz were more likely to report needing job training programs ($p = 0.01$).
- Respondents not living with extended family or in a tribal community were more likely to report needing job training programs (23.6%) compared to those living in such arrangements (12.1%) ($p = 0.04$).

Differences in Access to Job Training Programs

No significant differences were found.

Differences in Need for Home Visiting Services

- Respondents with lower incomes were more likely to report needing home visiting services, with 23.5% needing the service ($p=0.02$).
- Neighborhood differences in home visiting service needs were also apparent, with the highest need reported in La Luz (60.0%) and Chaparral (25.0%) ($p=0.03$).
- Foreign-born respondents were more likely to report needing home visiting services, with 31.6% indicating a need, compared to 12.6% of U.S.-born respondents ($p=0.04$).

Differences in Access to Home Visiting Services

No significant differences were found.

Differences in Need for Parenting Classes

- Foreign-born respondents were significantly more likely to report needing parenting classes, with 31.6% indicating a need, compared to 9.5% of U.S.-born respondents ($p=0.01$).

Differences in Access to Parenting Classes

- Those who became parents at 25 or older were more likely to experience difficulties accessing parenting classes ($p=0.04$).

Differences in Need for Preschool Services

- Individuals who spoke a language other than English at home were more likely to report needing preschool services (52.8%) compared to those who spoke only English (36.5%) ($p=0.05$).

Differences in Access to Preschool Services

No significant differences were found.

Differences in Need for Child Care Services

No significant differences were found.

Differences in Access to Child Care Services

No significant differences were found.

Differences in Receiving Childcare Assistance Subsidy

- Respondents who went to college were more likely to have received a CYFD childcare assistance subsidy ($p<0.001$).
- By school district, those in Gadsden Independent School District were the most likely to have received a CYFD childcare subsidy (80.0%), while none of the respondents in Tularosa Municipal School District had received it ($p=0.01$).

Differences in Need for Youth Mentor Services

- The likelihood of a child needing youth mentor services increased with parental/guardian age, peaking at 40% among parents aged 60 or older, compared to 0% among those aged 18–24 ($p<0.01$).

Differences in Access to Youth Mentor Services

No significant differences were found.

Differences in Need for School-Based Mental Health Services

- Hispanic or Latino respondents were more likely to report that their child needed mental health services at school (46.2%) than non-Hispanic White respondents (25.6%) ($p=0.03$).
- Children in households with other guardians or caretakers were the most likely to need school-based mental health services (65.0%), compared to 40.9% in single-parent households and 32.0% in two-parent households ($p=0.03$).
- The need for school-based mental health services was highest among children in households earning between \$25,000 and \$54,999 per year (49.4%) ($p=0.04$).
- Older parents/guardians were more likely to report their child needing school-based mental health services, with 66.7% of those aged 60 or older reporting a need compared to 15.0% of those aged 18–24 ($p=0.01$).

Differences in Access to School-Based Mental Health Services

No significant differences were found.

Differences in Need for School-Based Health Services

- Hispanic or Latino respondents were more likely to report their child needing health services at school (51.8%) compared to non-Hispanic White respondents (22.2%) ($p<0.001$).
- Children in households with other guardians or caretakers were the most likely to need health services at school (70.0%), followed by those in single-parent households (50.0%) ($p=0.02$).
- Respondents with household incomes between \$25,000 and \$54,999 reported the highest need (58.0%), while those earning \$55,000 or more reported the lowest need (28.1%) ($p=0.01$).
- Older parents were more likely to report their child needing school-based health services, with 65.9% of parents aged 40–49 reporting a need ($p<0.001$).
- Respondents who spoke a language other than English at home were significantly more likely to report their child needing school-based health services (62.3%) than those who spoke only English (36.8%) ($p<0.01$).
- The need for school-based health services varied by neighborhood, with the highest reported need in Mescalero (78.6%) and Tularosa (69.2%), compared to 33.6% in Alamogordo ($p<0.01$).
- Tularosa Municipal School District respondents reported the highest need (80.0%), while Alamogordo Public Schools reported the lowest (42.0%) ($p<0.01$).
- Those living in an extended family or tribal community were more likely to report a need for health services at school (63.6%) compared to those who did not (38.6%) ($p=0.01$).

Differences in Access to School-Based Health Services

- Respondents with household incomes of \$55,000 or more were the most likely to report difficulties accessing health services at school (33.3%), followed by those earning less than \$25,000 (28.6%) ($p=0.02$).

Differences in Feelings of Family Support

- Hispanic respondents were more likely to report having extended family support nearby, with 59.9% agreeing ($p < 0.001$). In contrast, 40.1% of non-Hispanic White respondents reported the same, while 48.9% of them disagreed.
- Women were more likely to report extended family support (57.5%) compared to men (39.3%), while 45.5% of men disagreed ($p < 0.01$).
- Those aged 25-29 had a higher level of agreement regarding having extended family support (72.4%), while respondents 60 or older were the least likely (37.9%) ($p < 0.001$).
- Individuals who speak a language other than English at home were more likely to report family support (64.8%) than English-only speakers (48.8%) ($p = 0.02$).
- By neighborhood, the highest level of agreement regarding having extended family support was in Mescalero and Chaparral ($p < 0.001$).
- Respondents living in an extended family or tribal community were more likely to report support (82.5%), while those not in such living arrangements were less likely (47.8%) ($p < 0.001$).
